public citizens for children + youth

KIDS AGES 12 AND OLDER CAN NOW GET THE COVID VACCINE!

A COVID vaccine is a *GAME CHANGER* for getting kids back to their typical lives!

Children need protection from COVID both for their health and the health of family and friends. New types of COVID and more in-person activities mean the virus is still being transmitted, and kids are still getting sick.

Where can children and youth get the vaccine?

- Contact your child's primary care provider and schedule an appointment to get the vaccine.
- Check out the county information below for links to vaccination sites. Some sites require an appointment and others are walk in. Be sure the Pfizer vaccine is being given at your location because it is the only currently authorized vaccine for children ages 12 to 17 in the United States. And be sure to check what age children the location is serving.
